Summary

Experienced Software Engineer with 4+ years delivering scalable solutions using Java 17, Domain-Driven Development, Spring Boot, Hibernate, Continuous Integration, and Continuous Delivery. Spearheaded the development of reusable reporting components, reducing development time by 66%. Proficient in RESTful APIs, event-driven architectures, cloud platforms (AWS, Azure), and agile frameworks.

Experience

System Analyst

December 2021– March 2026

dti digital

I worked as an outsourced backend engineer involved in building, maintaining, and modernizing both client-side applications and legacy systems for a company that serves more than 100 national and international clients. My work focuses on clean architecture, performance, scalability, and long-term maintainability. I collaborate closely with teams in an agile international environment, contributing to implementation, technical decision-making, and the evolution of existing platforms while ensuring business continuity and system reliability.

- Led development of reusable reporting components using Java 17 and Spring Boot, reducing report creation time by 66%
- Developed backend scheduler module using Spring Boot, enhancing testing and maintenance efficiency.
- Implemented TIBCO integration module with mockable controller, streamlining message testing and improving system robustness.
- Fixed and deployed a long-pending stock system by mapping existing commits, completing missing implementations, and optimizing performance using Java 11, Spring Boot, AWS, and SQL procedures. Delivered the solution to production within 2 months.

Education

Universidade Federal de Ouro Preto

2014 – 2021

Bachelor's Degree, Computer Engineering

Languages

- Portuguese (Native), English (Full professional proficiency)

Projects

Personal Library

Spring MVC project for cataloging and managing a personal book collection.

Implemented full CRUD functionality for Books, Authors, and Genres, while integrating external APIs such as Wikipedia and Gemini to retrieve detailed information about books and authors. The application was built using Java 21 and HSQLDB.

MyGrana

A cross-platform mobile application using Flutter to help university students manage their personal finances.

Implemented features for tracking income, expenses, and overall financial organization, while collecting anonymous user data to support future analytics and product improvements. The application was integrated with Firebase Realtime Database to enable real-time data storage and data synchronization.

Skills

- | | | |
|--------------------|---------|------------------------|
| • Java | • Azure | • Kafka |
| • Spring Framework | • Scrum | • CI/CD |
| • Hibernate | • Git | • Clean Code |
| • Java Swing | • SVN | • Clean Architecture |
| • REST APIs | • SQL | • Domain-Driven Design |
| • AWS | • TIBCO | • JUnit and Mockito |
